DEEP QUERY ASK- CASE MANAGEMENT

Government College, Jodhpur
Rajasthan Finishing School Program
Salesforce Business Analyst
Sponsored By: THE SMART BRIDGE
Trainer: Mir Abdul Rehman
Student Name: Govind Singh
Email Id: singhgovind75819@gmail.com

1. Project Overview & Business Objectives

- **Project Name:** Customer Support Case Management System (Salesforce Service Cloud)
- **Domain:** Customer Operations & Service Excellence
- **Role:** Lead Business Analyst
- **Target System:** Salesforce Service Cloud

Project Objective

Implement Salesforce Service Cloud to standardize, centralize, and automate end-to-end customer support operations. The goal is to eliminate manual spreadsheet and email tracking, automate case routing by priority and category, enforce Service Level Agreements (SLAs) through Entitlements & Milestones, and empower leadership with real-time operational analytics via dynamic reports and dashboards.

2. Milestone Introduction & BA-Driven Breakdown

Business Problem Statement (AS-IS State)

Customer support requests were previously handled through scattered inbox emails, phone calls, and static Excel sheets. There was no single source of truth, causing:

- Delayed first-time responses and missed follow-ups.
- Lack of SLA visibility or milestone warnings.
- Uneven agent workload distribution.
- Zero audit trail for historical support communications.

Business Impact (AS-IS)

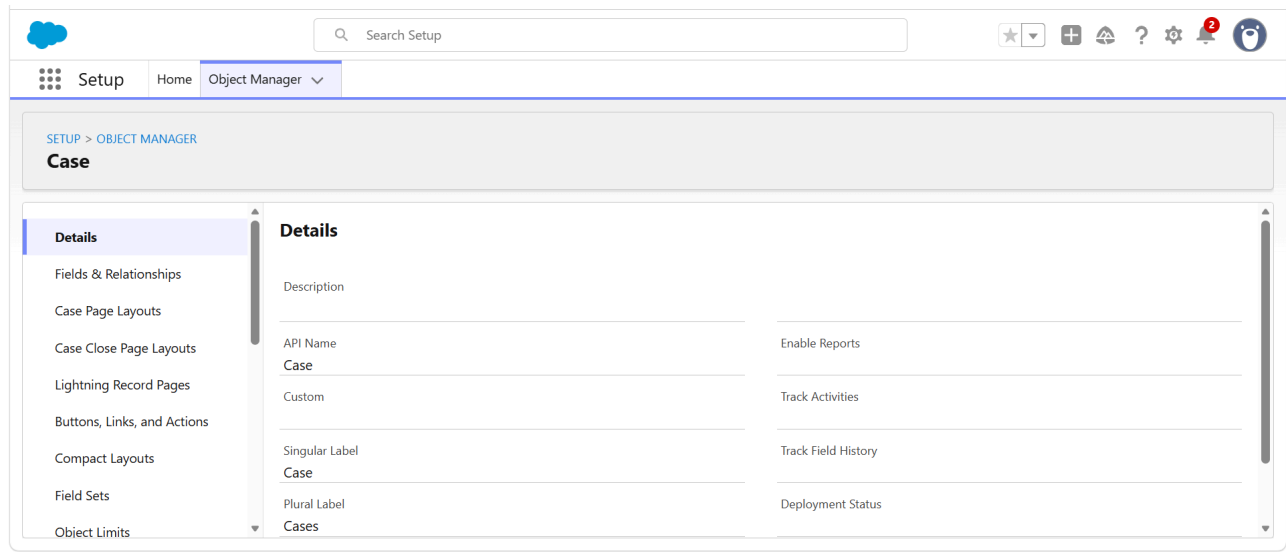

High customer churn, repeated status inquiries, frequent SLA breaches, burnout among support staff due to manual routing, and high operational costs without actionable management insight.

Business Objectives (TO-BE State)

- **Centralize:** Capture 100% of support inquiries into a unified Salesforce Case management system.
- **Automate:** Route cases instantly using automated assignment rules and queue structures.
- **Enforce:** Track SLAs dynamically using Entitlement Processes with milestone alerts.
- **Visualize:** Provide real-time operational visibility through native executive dashboards.

3. Scope Definition (BA View)

In Scope (Salesforce Service Cloud) PDF	Out of Scope (Future Phases) PDF
• Case Creation via Web-to-Case & Email-to-Case channels	• Telephony (CTI) Integration (e.g., Genesys / Amazon Connect)
• Automated Assignment Rules & Specialized Support Queues	• AI Chatbots & Einstein Bot Automation
• SLA Tracking using Entitlements, Processes & Milestones	• External ERP / Billing System Real-time Integrations
• Case Lifecycle Management (Status, Priority, Type picklists)	• Salesforce Knowledge Base / Article Management
• Real-time Executive Dashboards & Operational Reports	• Field Service Management (FSL)

4. Data Model & AS-IS vs TO-BE Analysis:-

Standard Objects Mapped

- **Account:** Customer Organization / Enterprise Entity
- **Contact:** Individual Customer / Point of Contact
- **Case:** Central Support Ticket / Inquiry
- **Case Comment:** Operational Communications & Agent Notes
- **Case History:** System Audit Trail & Field Changes
- **Entitlement & Milestone:** SLA Enforcement & Timer Tracking

AS-IS vs. TO-BE Gap Analysis Matrix:-

Process Area	AS-IS Manual State PDF	TO-BE Salesforce Service Cloud State PDF
Tracking & SLA Monitoring	Disparate Excel spreadsheets & individual inboxes	Centralized Salesforce Case Object with unique Case Numbers
Case Assignment Routing	Manual email forwarding & subjective distribution	Automated Assignment Rules & Multi-Tier Queues
SLA Enforcement	Manual calendar checks / Unmonitored	Entitlements & Milestone Countdown Timers
Communication	Personal email threads without context	Integrated Feed, Case Comments & Audit History
Reporting & Analytics	Manual end-of-month manual log aggregation	Live, dynamic Dashboards & Multi-Metric Reports

5. TO-BE Process Flow & Step-by-Step Implementation:-

Step 1: Case Object & Picklist Fields Setup

To maintain strict data integrity and prevent dirty data entries, standardized picklist attributes were configured under **Setup -> Object Manager -> Case -> Fields & Relationships**:

- **Case Type (Picklist)**: Billing, Technical, General
- **Priority (Picklist)**: High, Medium, Low
- **Status (Picklist)**: New, In Progress, Escalated, Closed
- **Origin (Picklist)**: Email, Web, Phone
- **Description (Long Text Area)**: Detailed problem statement submitted by the customer.

Step 2: Support Queues Creation:-

Created four dedicated, role-based queues under **Setup -> Queues** with Case as the supported object and assigned dedicated support agents/test users as queue members:

1. **Billing Queue**: Dedicated to invoice disputes, payment issues, and financial inquiries.
2. **Tech Support Queue**: Dedicated to technical troubleshooting and platform bugs.
3. **Customer Support Queue**: Dedicated to general assistance and account updates.
4. **Escalation Queue**: Dedicated to high-priority cases requiring senior management intervention.

The screenshot shows the Salesforce Setup interface. The left sidebar contains navigation links: Setup, Home, Object Manager, Users, Analytics Groups, Permission Set Groups, Permission Sets, Profiles, Public Groups, Queues, Roles, User Management Settings, Feature Settings, and Data.com. The main content area is titled 'Users' and displays the details for a user named 'ALEX PATEL'. The user's email is 'gs9660023667@gmail.com' (Verified), and the username is 'alexgs9660023667@gmail.com'. The user is active and has the role of 'Force.com - Free User'. The 'User Detail' section includes fields for Name, Alias, Email, Username, Nickname, Title, and Company. The 'Role' section includes fields for User License, Profile, Active, Marketing User, Offline User, and Knowledge User.

User Detail	
Name	ALEX PATEL
Alias	apate
Email	gs9660023667@gmail.com (Verified)
Username	alexgs9660023667@gmail.com
Nickname	User17897191637877876181
Title	
Company	

Role	
User License	Force.com - Free
Profile	Force.com - Free User
Active	☒
Marketing User	☐
Offline User	☐
Knowledge User	☐

Step 3: Case Assignment Rules & Routing Logic (Core AutomationFlow):-

Implemented automated assignment rule criteria (**Setup -> Case Assignment Rules**) to evaluate and route cases instantly upon creation.

Assignment Rule Entry Criteria Matrix

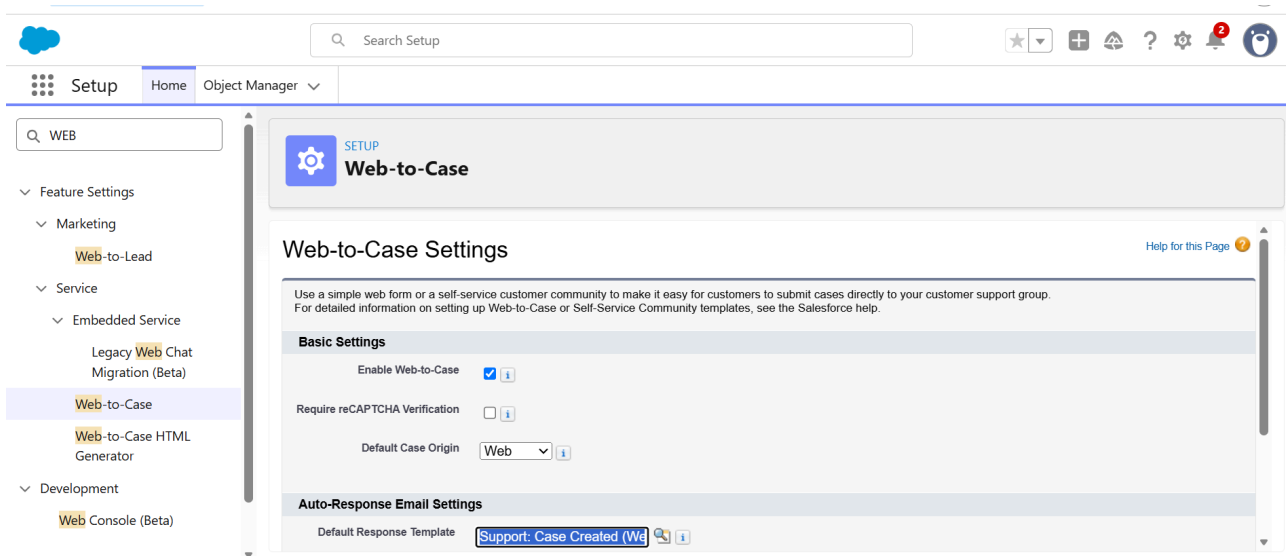

1. **Entry 1:** Case: Priority EQUALS High → Assign to Escalation Queue
2. **Entry 2:** Case: Type EQUALS Billing → Assign to Billing Queue
3. **Entry 3:** Case: Type EQUALS Technical → Assign to Tech Support Queue
4. **Entry 4:** Case: Type EQUALS General → Assign to Customer Support Queue

The screenshot shows the Salesforce Setup interface for Case Assignment Rules. The left sidebar contains a search bar and a navigation menu with categories like Feature Settings, Service, Case Assignment Rules, Case Teams, and Contact Roles. The main content area is titled 'Case Assignment Rules' and includes a 'Case assignment' rule detail. The rule is named 'Case assignment', is active, and was created by Govind Singh on 9/18/2026 at 10:18 PM. Below the rule detail is a table for 'Rule Entries' with columns for Action, Order, Criteria, Assign To, and Email. The table contains one entry with the criteria 'Case: Case Origin EQUALS Email,Web' and is assigned to Govind Singh.

Action	Order	Criteria	Assign To	Email
Edit Del	1	Case: Case Origin EQUALS Email,Web	Govind Singh	☐

Step 4: Case Intake Channels (Web-to-Case & Email-to-Case):-

- **Web-to-Case:** Enabled and embedded on the external customer support portal. Default system values forced: Status = New, Priority = Medium, Origin = Web.
- **Email-to-Case:** Configured automated email routing address (singhgovind75819@gmail.com). Incoming messages auto-generate case records with default values: Status = New, Priority = Medium, Origin = Email.

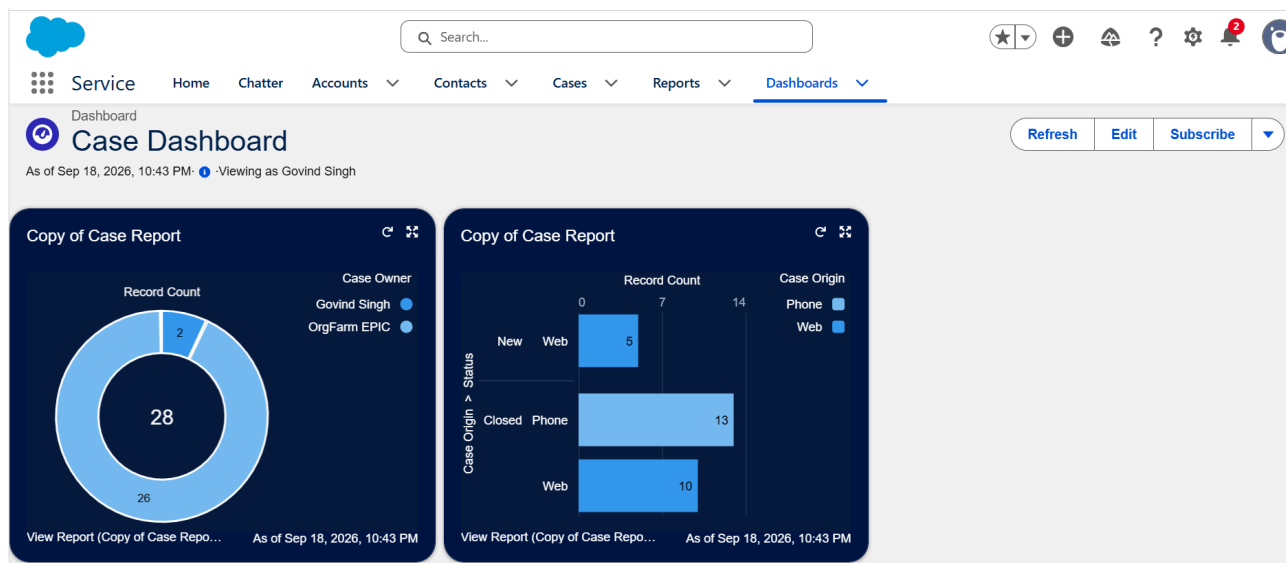

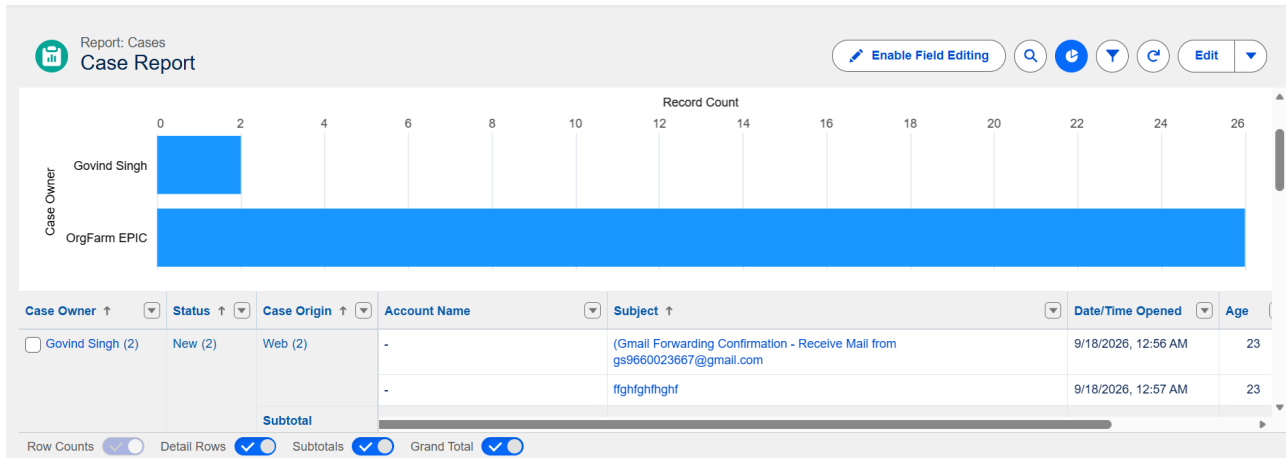

Step 5: SLA Tracking & Entitlement Management:-

- Configured Entitlement Processes and Milestones (e.g., First Response Time: 1 Hour, Resolution Time: 24 Hours for High Priority).
- Configured milestone countdown timers on Case layouts to trigger visual warnings prior to SLA breaches.

Step 6: Reports & Dashboards Setup:-

Configured 4 core analytical reports saved in the Public Reports folder, assembled into a real-time Customer Support Operations Dashboard:

1. **Total Cases by Status:** Bar Chart visualization tracking case progression.
2. **Cases by Origin (Web vs Email):** Donut Chart showing channel volume distribution.
3. **Open Cases by Queue:** Tabular report filtered by Status NOT EQUAL TO Closed.
4. **Agent Workload & Performance Metrics:** Summary report grouped by Case Owner.

6. User Stories & User Acceptance Testing (UAT):-

US-01: Case Intake Automation

- **User Story:** As a Customer, I want to submit support requests via web forms or emails so that my issues are logged instantly without human delay.
- **Acceptance Criteria 1:** Given a customer submits a valid web form, when submitted, a Case record must be created in Salesforce with Origin = Web and Status = New.
- **Acceptance Criteria 2:** Given a customer sends an email to support, when

received, an Email-to-Case rule must generate a Case record with Origin = Email.

- **Acceptance Criteria 3:** An automated confirmation email with the unique Case Number must be dispatched to the customer instantly.

US-02: Automated Queue Routing:-

- **User Story:** As a Support Manager, I want incoming cases automatically routed based on Case Type and Priority so that workloads are balanced across teams.
- **Acceptance Criteria 1:** Given a new case with Type = Billing, when evaluated by Assignment Rules, it must be assigned to the Billing Queue.
- **Acceptance Criteria 2:** Given a new case with Type = Technical, it must be assigned to the Tech Support Queue.
- **Acceptance Criteria 3:** Given any new case with Priority = High, it must override default category routing and assign directly to the Escalation Queue.

US-03: SLA & Milestone Tracking:-

- **User Story:** As a Support Agent, I want SLA milestone countdown timers on high-priority cases so that I can respond and resolve issues within agreed deadlines.
- **Acceptance Criteria 1:** Given a High-Priority case is created, an Entitlement record must automatically attach a 1-Hour First Response Milestone.
- **Acceptance Criteria 2:** When the agent sends the first email response, the First Response Milestone must mark as Completed.
- **Acceptance Criteria 3:** If the milestone reaches within 15 minutes of expiration without action, a visual SLA Warning badge must display on the Case Feed.

US-04: Management Analytics & Dashboard Visibility:-

- **User Story:** As a Support Director, I want a real-time dashboard displaying case status, origin, queue volume, and agent performance to make data-driven staffing decisions.
- **Acceptance Criteria 1:** The dashboard must display 4 distinct components: Cases by Status (Bar), Cases by Origin (Donut), Open Cases by Queue (Table), and Workload by Agent (Summary).
- **Acceptance Criteria 2:** Dashboard metrics must refresh in real-time or upon manual refresh without requiring full page reloading.
- **Acceptance Criteria 3:** Clicking on any chart segment must drill down directly into

the underlying filtered report.

7. User Acceptance Testing (UAT) Execution Matrix:-

Test Case ID	Requirement / User Story PDF	Test Scenario Description PDF	Expected Result PDF	Pass / Fail PDF
UAT-TC-01	US-01 (Intake)	Submit web-to-case form with valid data	Case generated in Salesforce with Origin = Web & confirmation sent	PASS
UAT-TC-02	US-02 (Routing)	Submit billing case via email	Case assigned	PASS

			automatically to Billing Queue	
UAT-TC-03	US-02 (Routing)	Submit high priority technical case	Case assigned automatically to Escalation Queue	PASS
UAT-TC-04	US-03 (SLA)	Verify milestone timer on High Priority case	1-Hour Countdown timer starts automatically	PASS
UAT-TC-05	US-04 (Analytics)	Verify dashboard chart rendering	All 4 components render accurately matching underlying report data	PASS
